Urgent Field Safety Notice (FSN) Intuition Risk addressed by FSN

1. Information on Affected Devices* 1. Intuition; versions with touch display 1. Intuition; versions with touch display 1. Intuition, Aceso, Omnera 400T 1. 3. Unique Device Identifier(s) (UDI-DI) 1. 4. Primary clinical purpose of device(s)* 1. The system is a stationary X-ray system, intended to emit ionizing radiation for diagnostic and interventional radiology by obtaining radiographic images of various portions of the human body in a clinical environment. The system is not intended for mammography. 1. Device Model/Catalogue/part number(s)* 0180/Intuition 1. 6. Software version All 1. 7. Affected serial or lot number range All

	2 Reason for Field Safety Corrective Action (FSCA)*
2	Description of the product problem*
	Cleaning of the manoeuver handle or the manoeuver display with excessive amount of disinfectants containing certain components pose a risk of causing a short circuit due to ingress of liquid, which in turn could cause uncontrolled up- or down movement of the overhead tube crane (OTC). Examples of components which could result in a risk of uncontrolled movement are quaternary ammonium compounds (e.g. benzalkonium chloride, alkyl dimethylbenzyl ammonium chlorides) and alkyl dimethyl ethylbenzyl ammonium chlorides)- L-lactic acid- Citric acid- pH adjusting compounds and stabilizers (commonly present in disinfectants containing hydrogen peroxide).
2	2. Hazard giving rise to the FSCA*
V.	The potential hazard of the above-mentioned risk is uncontrolled movement of the OTC.
	Either after a z-button has been released or spontaneous movement without pressing a
	z-button to activate the movement.
2	Probability of problem arising
	The probability of an uncontrolled z-movement of the OTC is estimated to be 0,02 times
	per year and system.
	4. Predicted risk to patient/users

FSN Ref: FSN_2021_01_EN

The probability for a squeezing hazard to occur is assessed to be below 0,005% of all examinations.
Further information to help characterise the problem

FSCA Ref: FSCA 210301C01

By not following the recommended cleaning routines and cleaning agents, the risk of uncontrolled movement is estimated to increase by more than 450 %.

6. Background on Issue

Arcoma has received increasing number of customer complaints of uncontrolled movements in the last year. None of these have reported a squeezing hazard. Root cause of the uncontrolled movement has been identified as cleaning of the manoeuver handle and the manoeuver display with excessive amounts of disinfectants containing e.g. quaternary ammonium compounds (e.g. benzalkonium chloride, alkyl dimethyl benzyl ammonium chlorides and alkyl dimethyl ethylbenzyl ammonium chlorides), L-lactic acid, citric acid and pH adjusting compounds and stabilizers (commonly present in disinfectants containing hydrogen peroxide).

Arcoma has received reports of uncontrolled movement only for the type of display unit referred to under section 1.1.

referred to under section 1.1.

Transmission of this Field Safety Notice This notice needs to be passed on all those who need to be aware within your organisation or to any organisation where the potentially affected devices have been transferred. (As appropriate) Please transfer this notice to other organisations on which this action has an impact. (As appropriate) Please maintain awareness on this notice and resulting action for an appropriate period to ensure effectiveness of the corrective action. Please report all device-related incidents to the manufacturer, distributor or local representative, and the national Competent Authority if appropriate, as this provides important feedback..*

Note: Fields indicated by * are considered necessary for all FSNs. Others are optional.
